

## EMERGING TECHNOLOGIES, LLC. EXPANDS OFFERING TO PROVIDE CONTRACT MANUFACTURING SERVICES

*PCB and Cable Assembly*

*Lot of PCB Assemblies*

*Cable Assemblies*

*User Interface Assembly*

### The New Service

Drawing from years of experience manufacturing custom systems, Emerging Technologies, LLC. of Manitowoc Wisconsin announces the “official” addition of contract manufacturing services to its existing OEM (Original Equipment Manufacturer) focused services lineup.

Emerging Technologies currently manufactures printed circuit board based sub-assemblies, as well as cable and harness assemblies for OEM customers. Additionally, Emerging Technologies has experience manufacturing control panels and sub-assemblies, mechanical and electrical fixtures, and machined components and sub-assemblies.

Customers enjoy the support of an outside source that specializes in the manufacture and test of sub-assemblies, thus allowing them to stay focused on what they do best. This approach, not only provides innovation and expertise to the customer, but also adds additional flexibility by effectively extending the ability to meet schedules, shorten design cycles, and reduce cost of manufacturing.

Emerging Technologies’ ability to respond quickly allows the customer to provide flexible and timely delivery of high quality products and systems to their customers.

Emerging Technologies’ has dedicated tools, equipment and shop space to contract manufacturing services, in addition to that already allocated for design, test and machining services.

Emerging Technologies’ expertise in design and one of a kind manufacturing has led to this offering. “As custom printed circuit board based products and custom cable and harness assemblies have been developed for existing customers, the progression to contract manufacture of these items has come naturally” states Mark Van Steenburgh, President of Emerging Technologies, LLC.

### A Bit of History

Since 1999, Emerging Technologies, LLC. has been designing, building and deploying custom Test, Data Acquisition, and Embedded Control systems for Midwestern customers.

In late 2000, Emerging Technologies began the introduction of its

Embedded Control Product line. The line began with the serial 32 segment LCD controller and has grown to include variations of that product and continues to grow with new offerings continually under development.

After the acquisition of the Rapids road facility in Manitowoc, in mid 2003, custom-machining services were added. The additional floor space supported the placement of the machining equipment acquired over the previous year.

Now, in late 2004, the “official” addition of contract manufacturing services. For additional information contact:

### In Closing

Emerging Technologies’ experience and focus is now available to support manufacturers in their quest to innovate, increase quality, shorten schedules, and reduce costs.
